School of Marine Science and Policy
Lewes, DE USA

Spartina alterniflora

Phragmites australis

Beach

Bulkhead

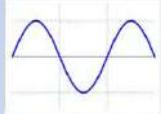

Riprap

Riprap-Sill

Overview of Research

- Macrofauna shoreline sampling
 - Weekly seines for fish assemblage and blue crab abundance
- Diel-cycling hypoxia analysis along shoreline types
- Atlantic silverside egg deposition along shoreline types
- Riprap-sill macrofauna shoreline sampling

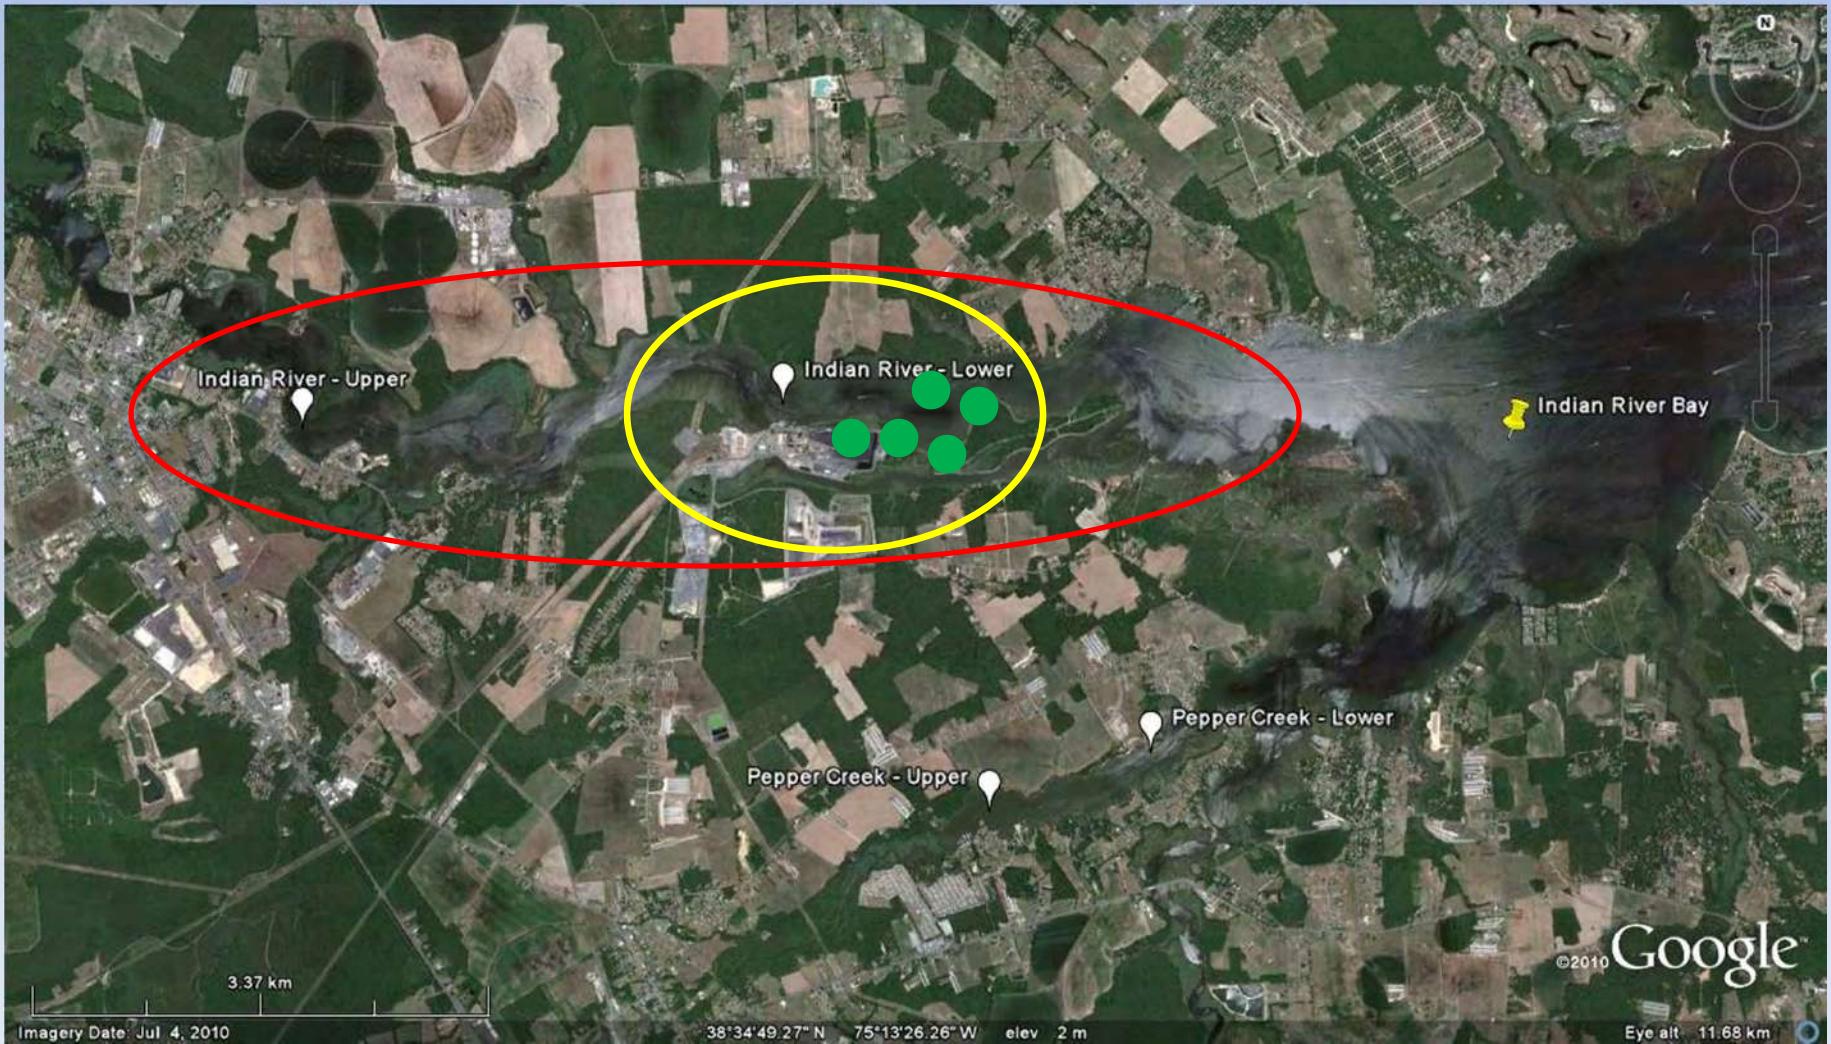

Overview of Research

- Macrofauna shoreline sampling
 - Weekly seines for fish assemblage and blue crab abundance
- Diel-cycling hypoxia analysis along shoreline types
- Atlantic silverside egg deposition along shoreline types
- Riprap-sill macrofauna shoreline sampling

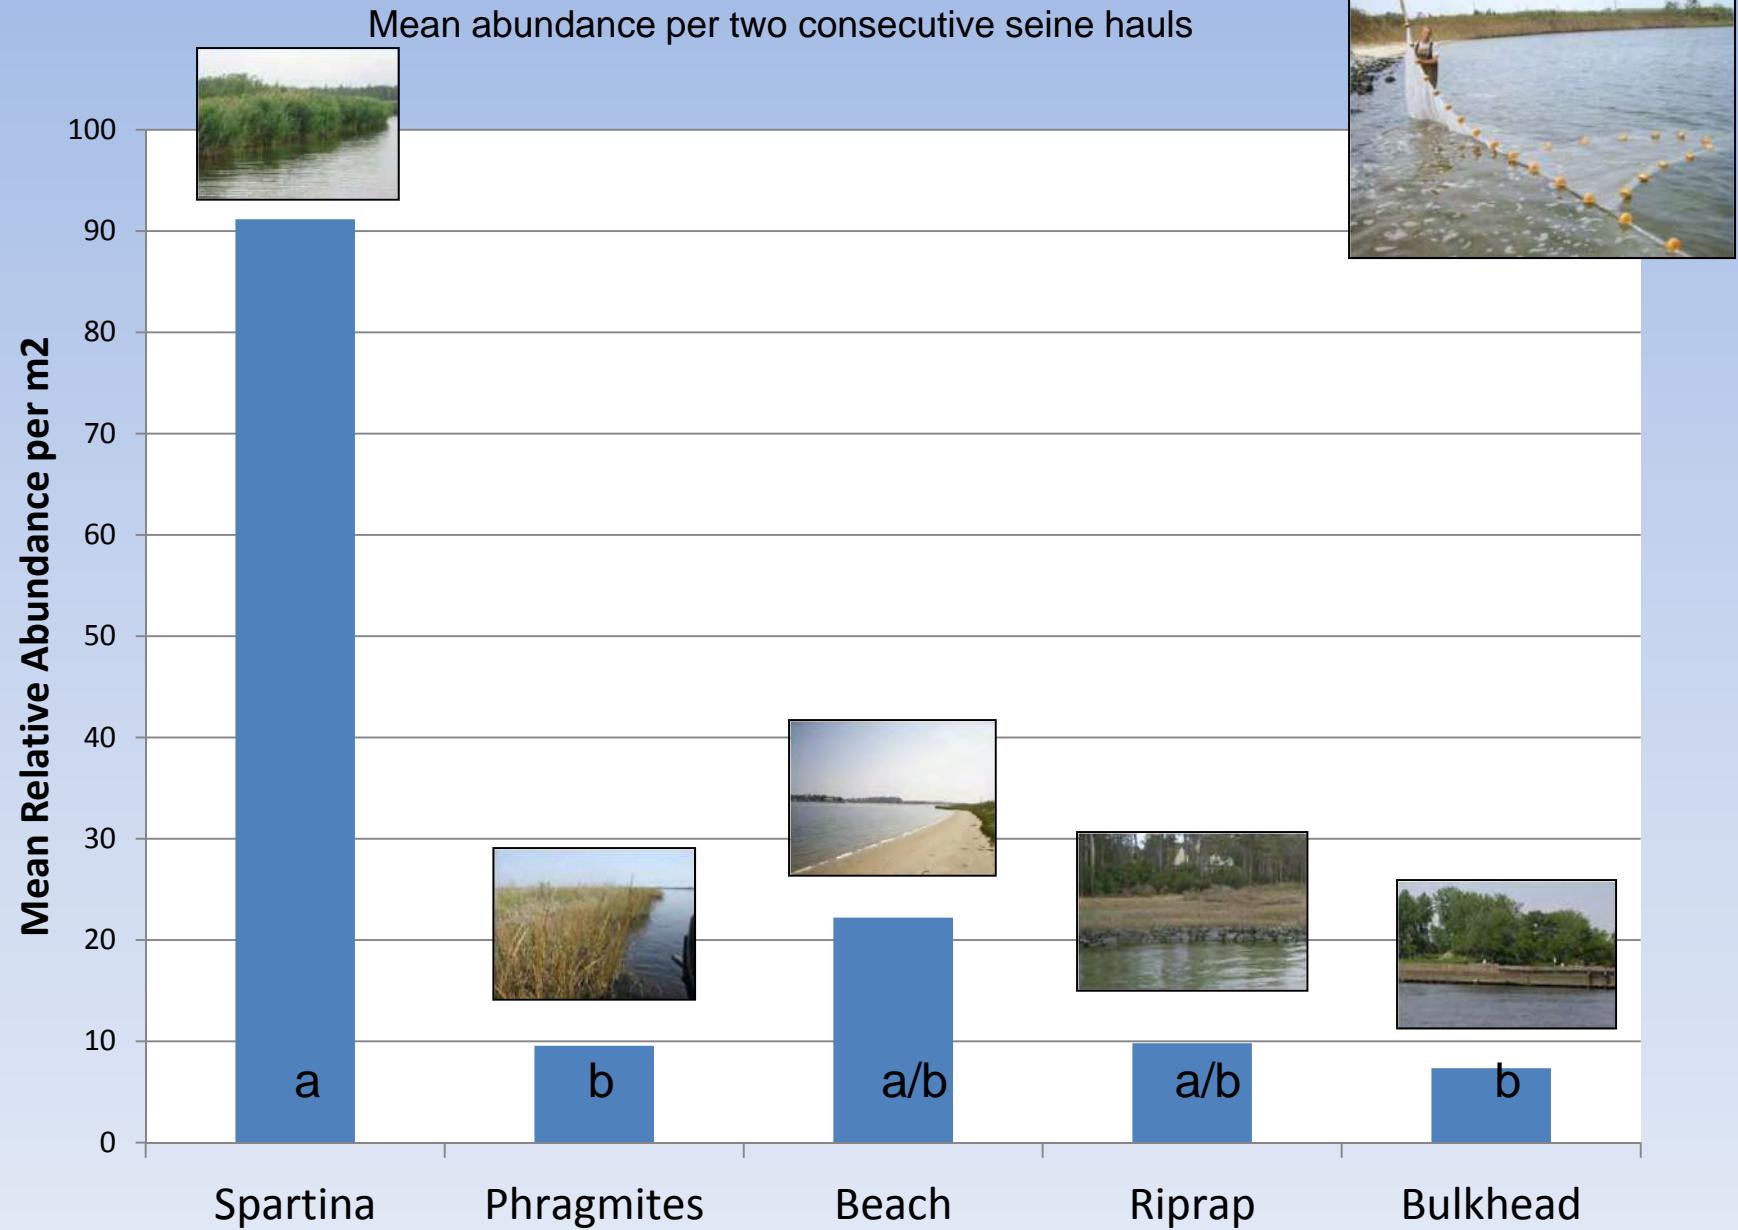

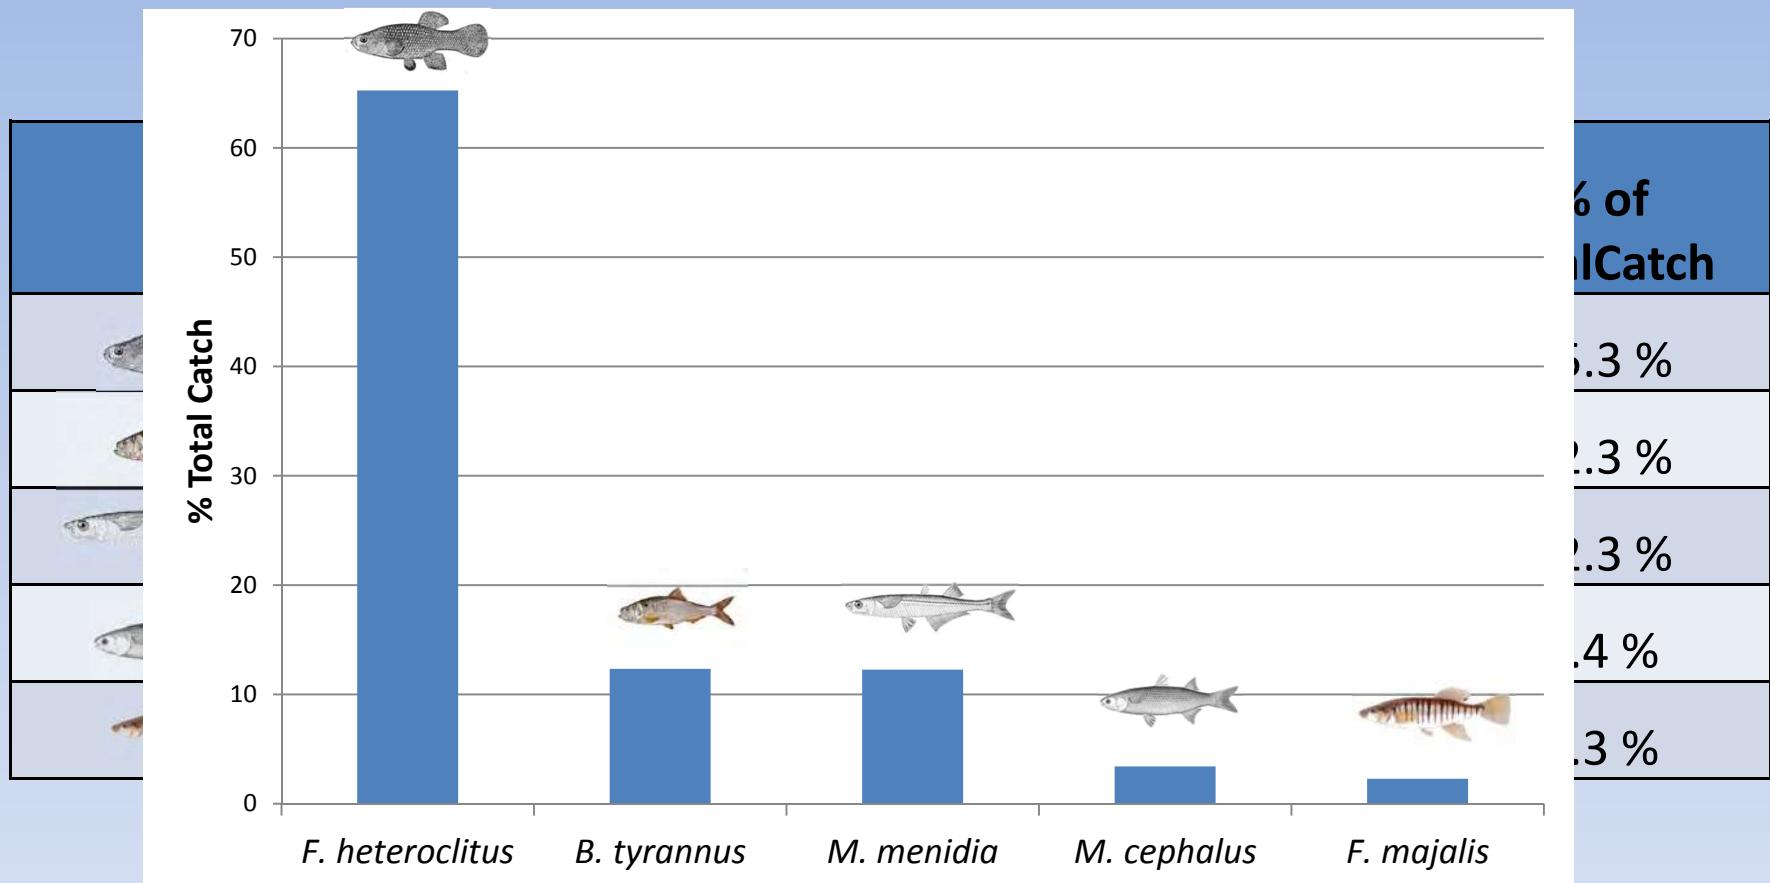

Weekly Shoreline Macrofauna Sampling

Shoreline Type - Fish Abundance

Species Abundance

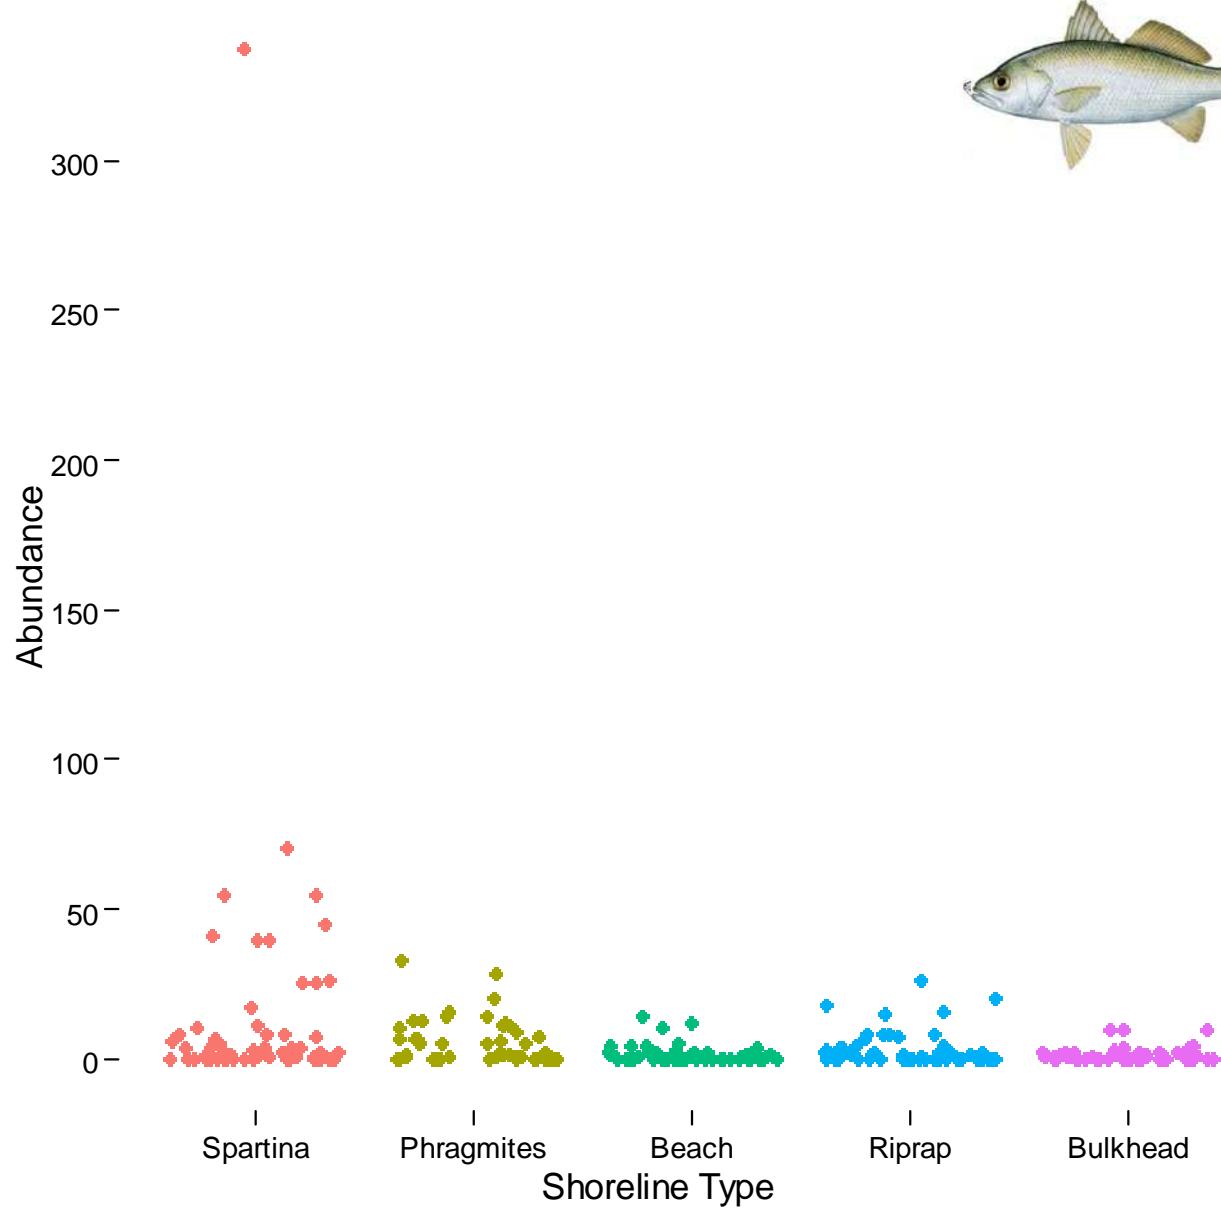

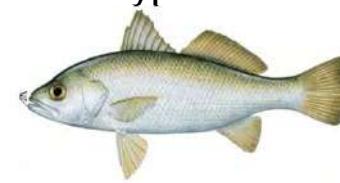

5 Species account for > 95% total catch

96962 fish collected

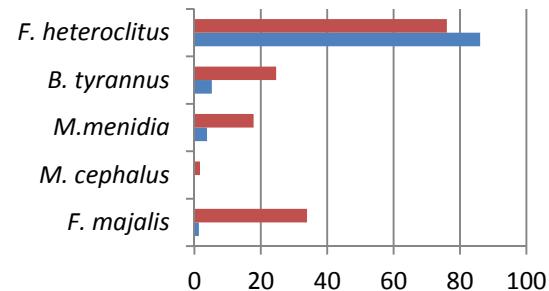

Largest collections ≈500 mm American eel

Mean length ~ 56 mm

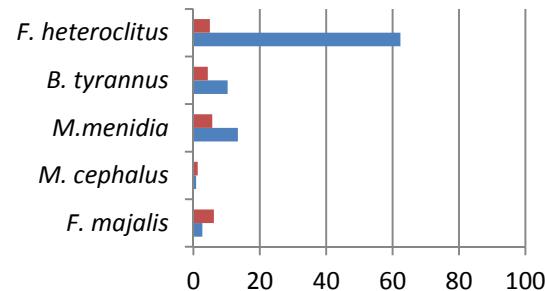

Bairdiella chrysoura Abundances by Shoreline Type

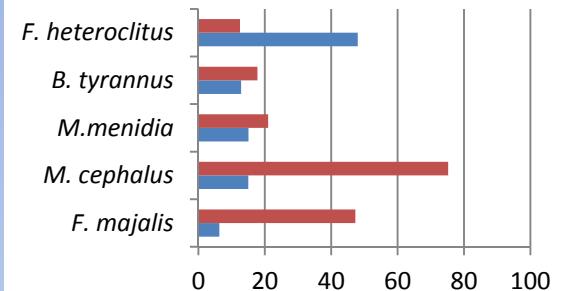

Spartina

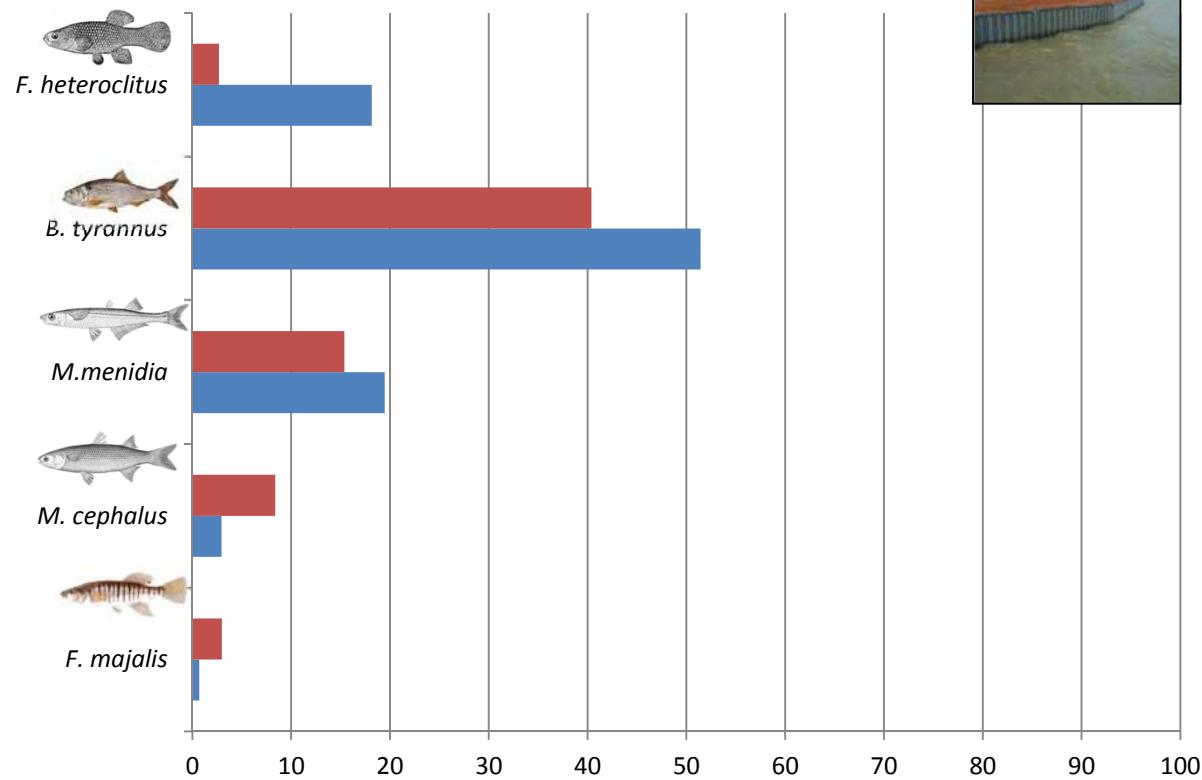

Phragmites

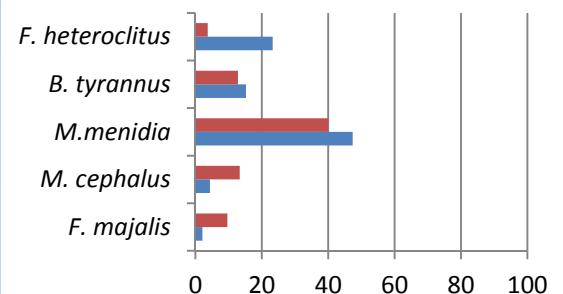

Beach

Bulkhead

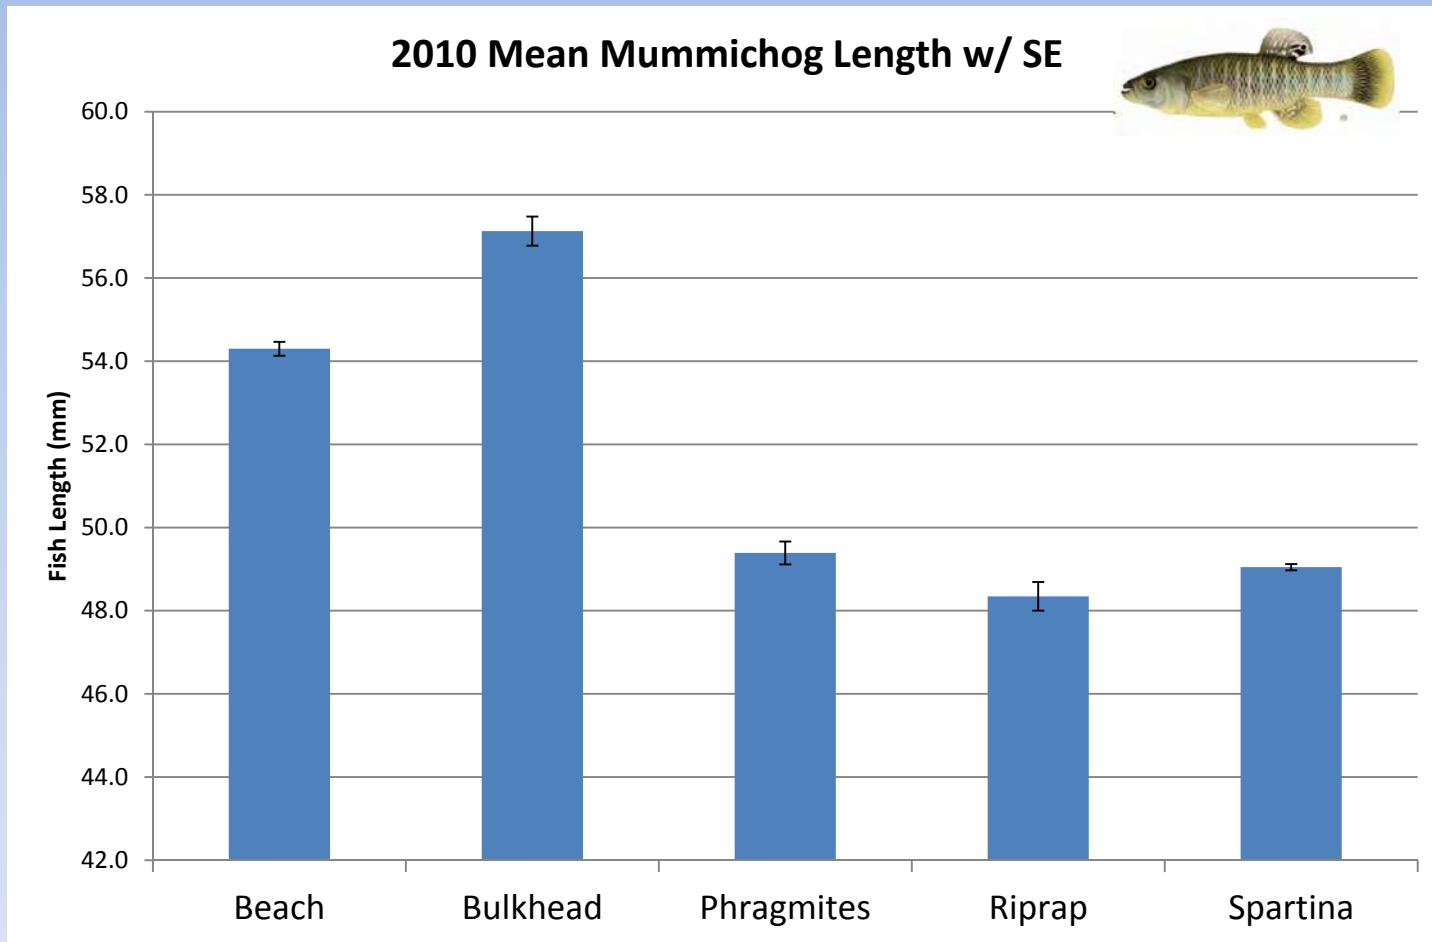

Riprap

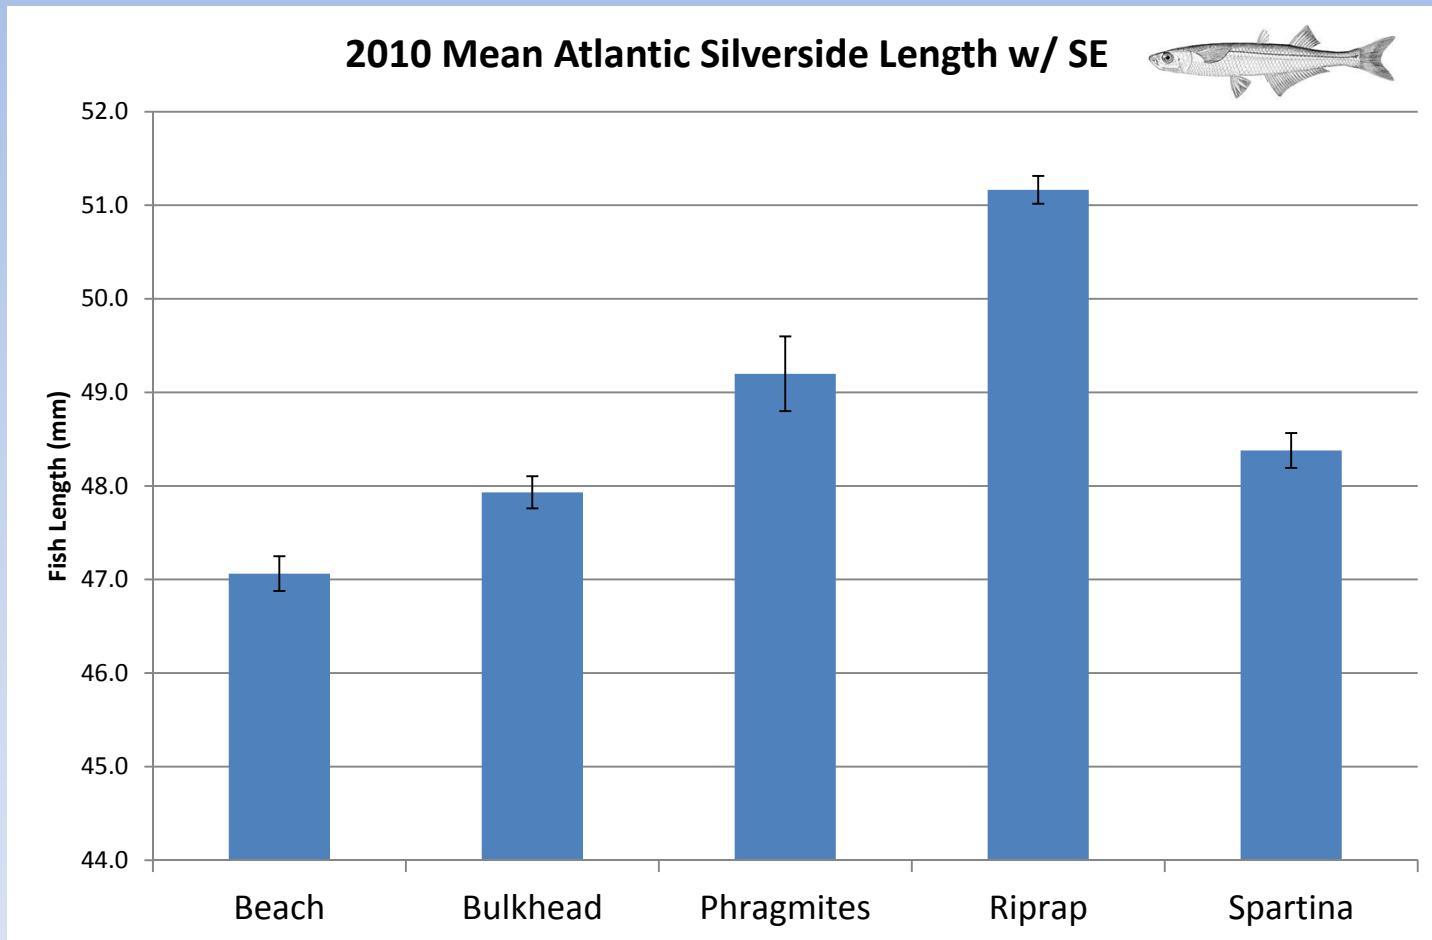

Red Bars – % of species
abundance from shoreline type
Blue Bars – % of catch at
shoreline type

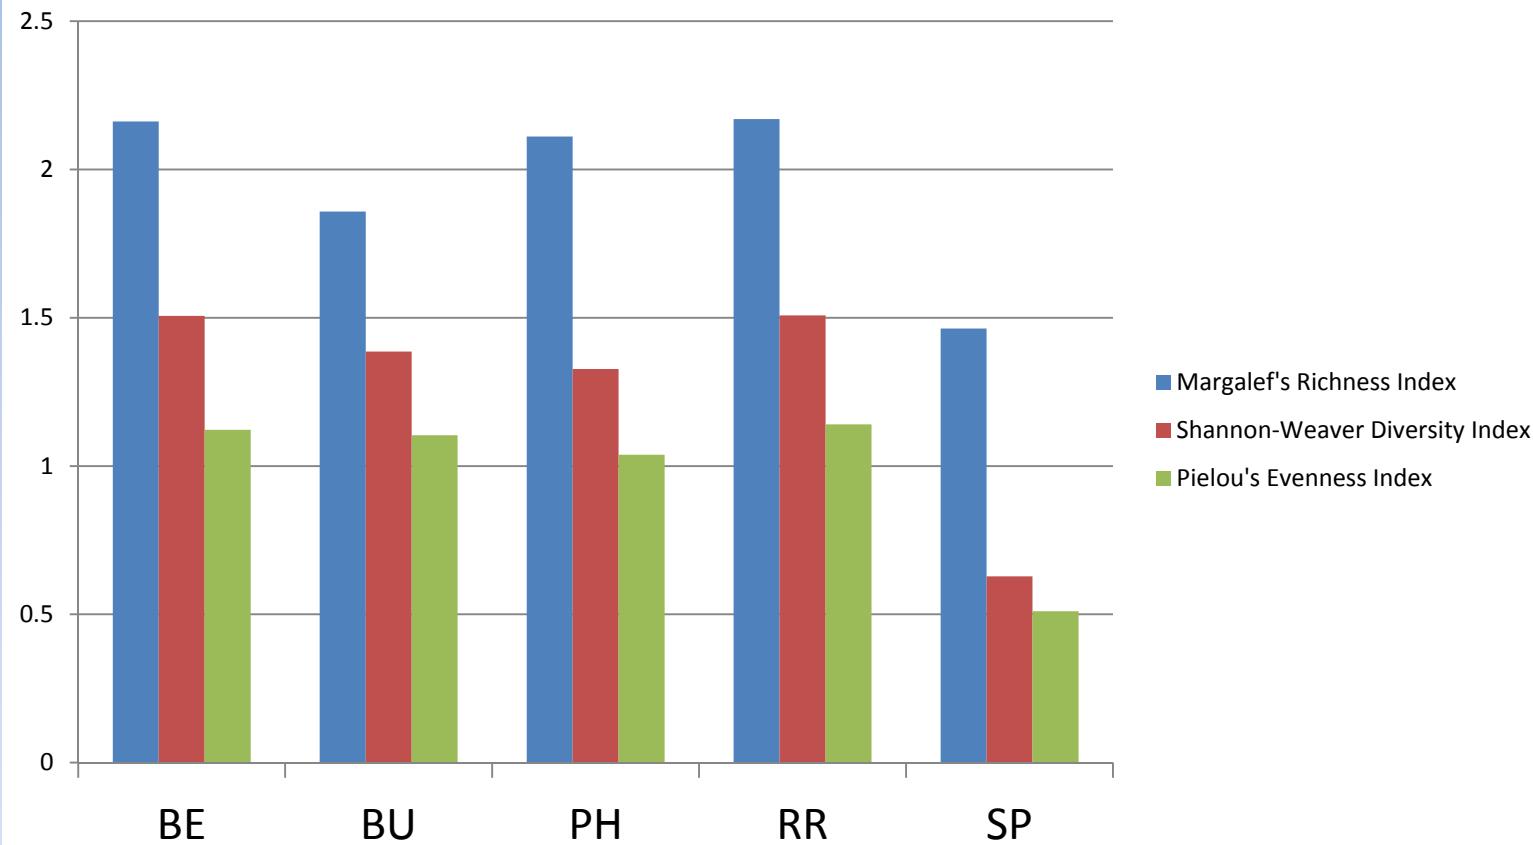

Fish Length

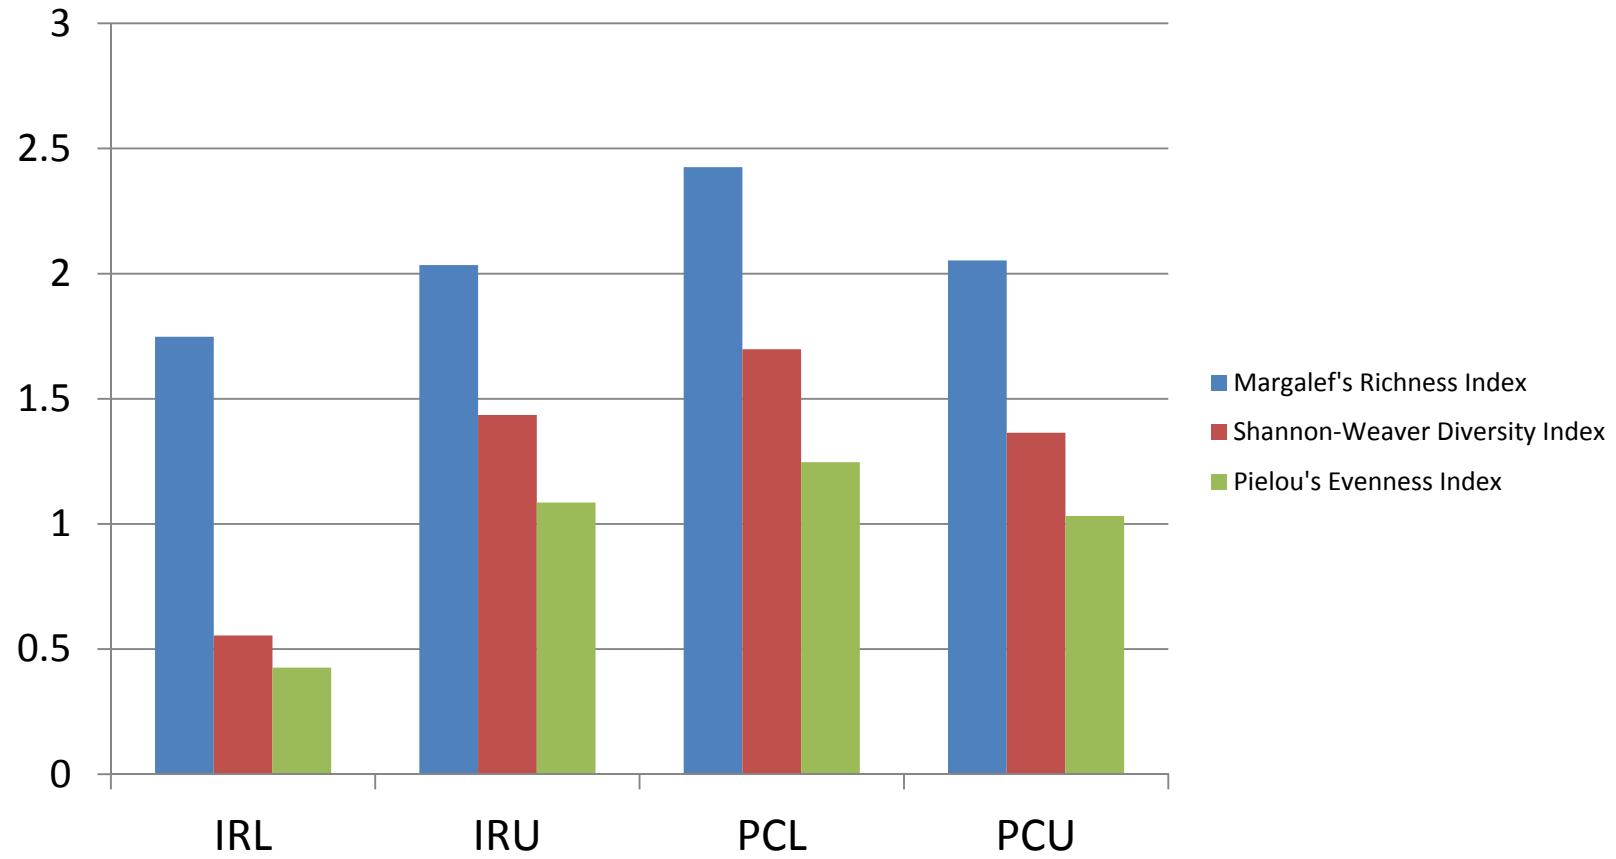

Fish Length

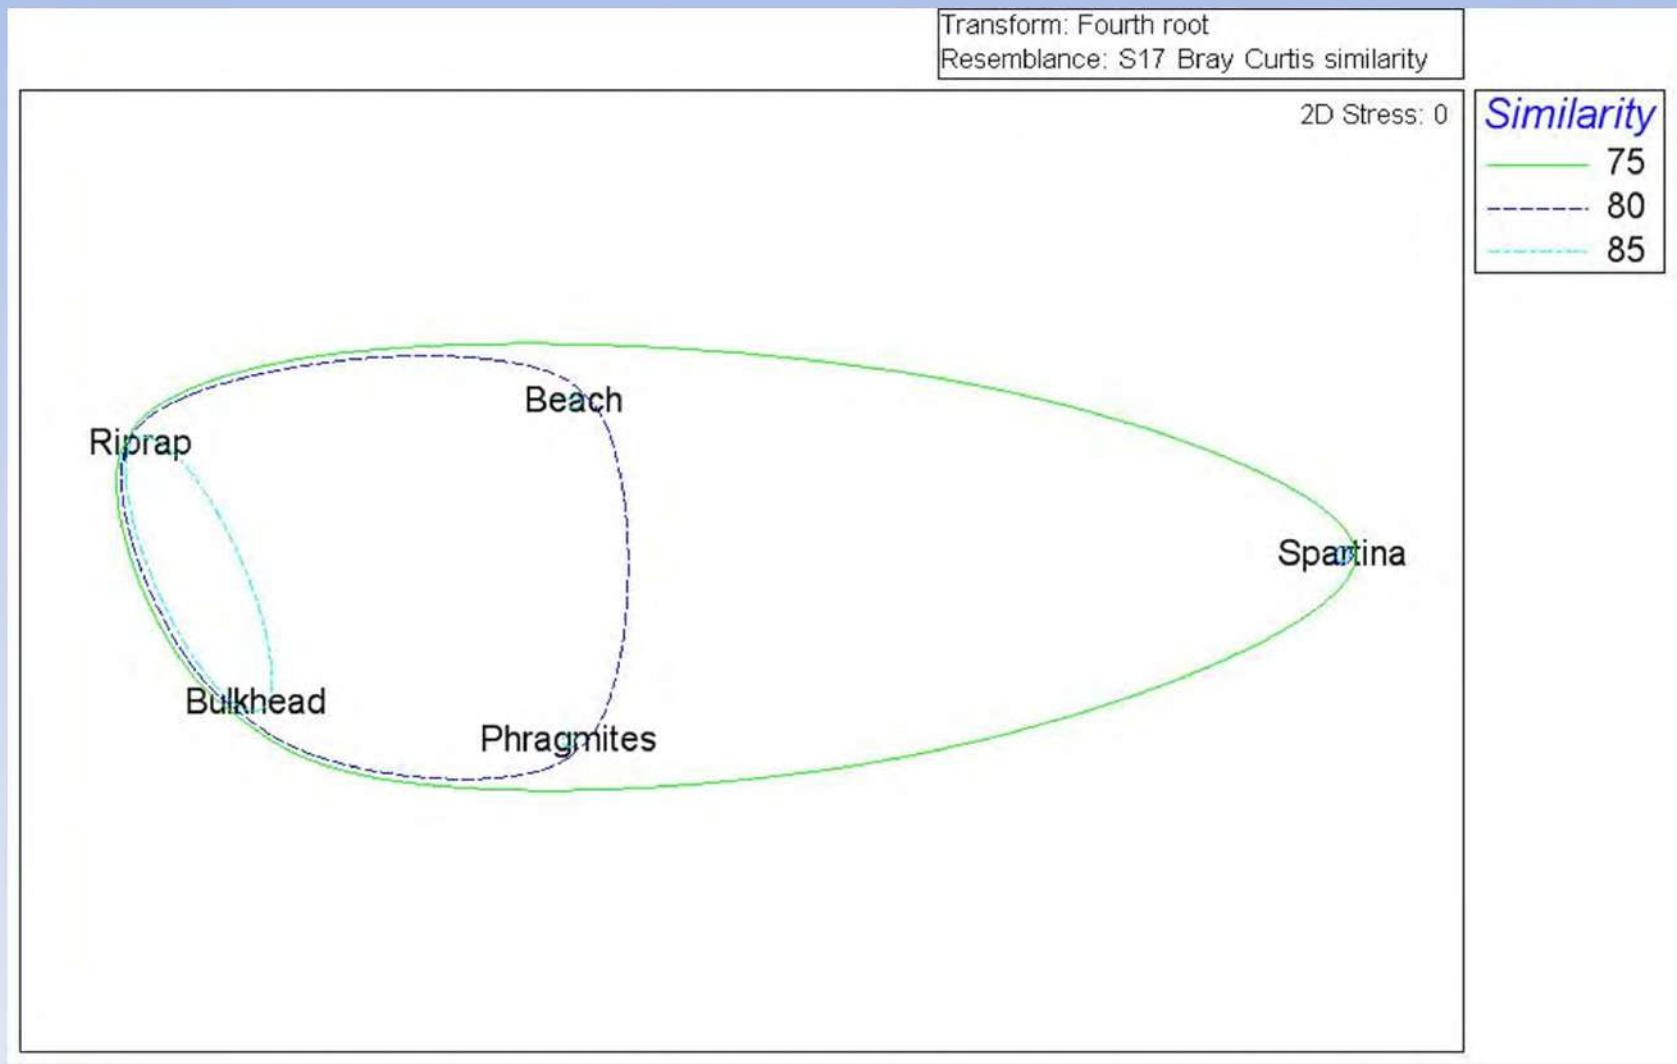

Fish Assemblage Index Scores by Shoreline Type

Multi-Dimensional Scaling

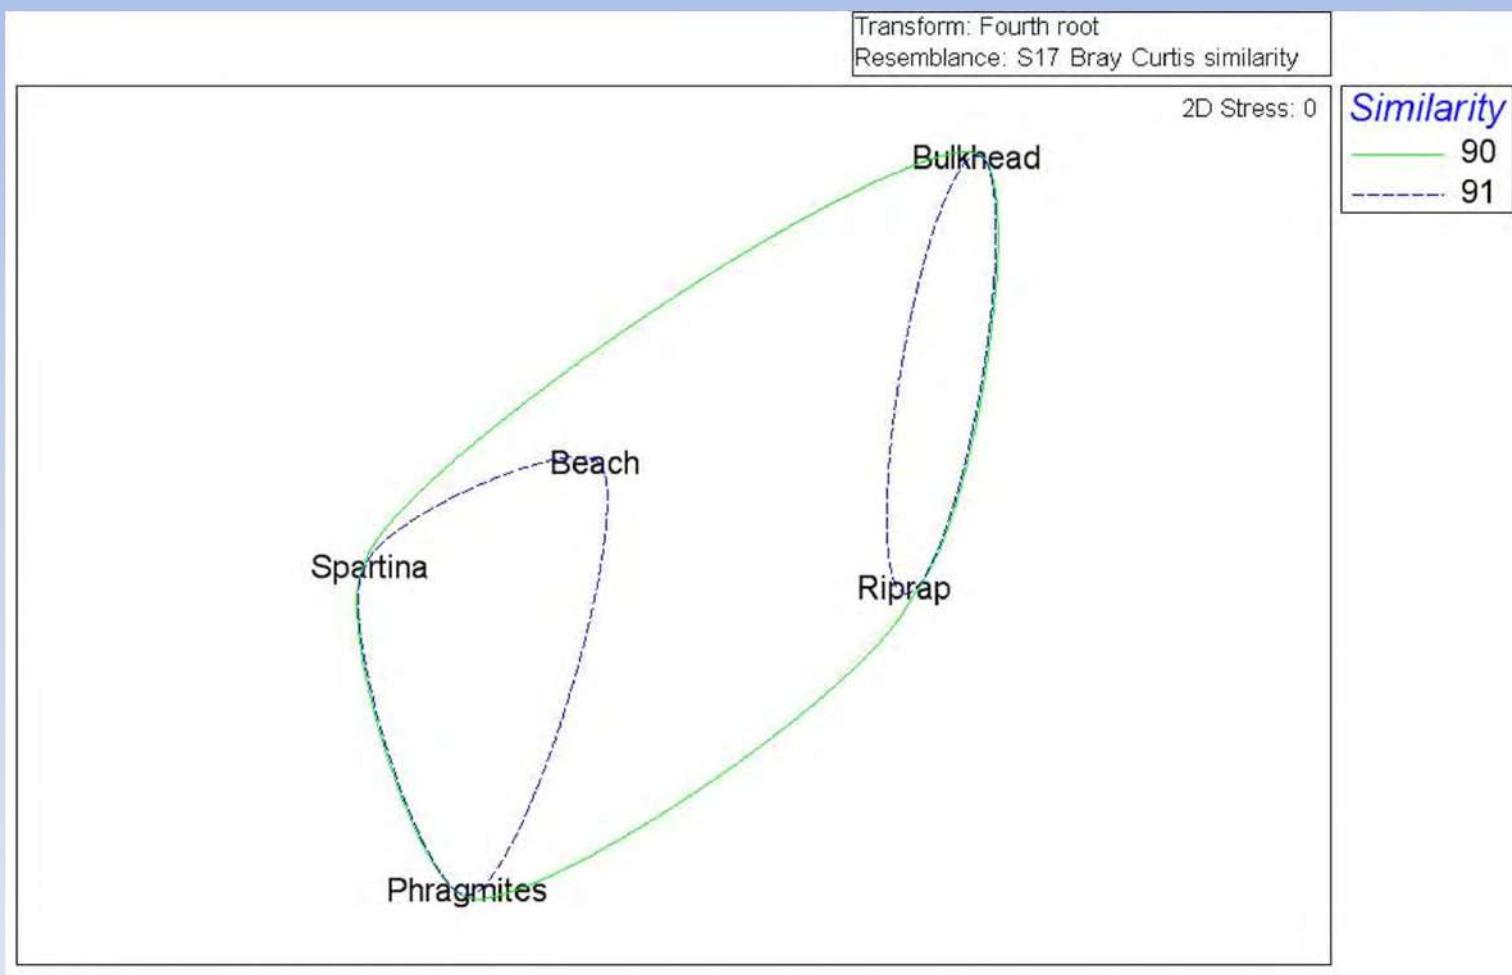

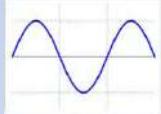

Blue Crab

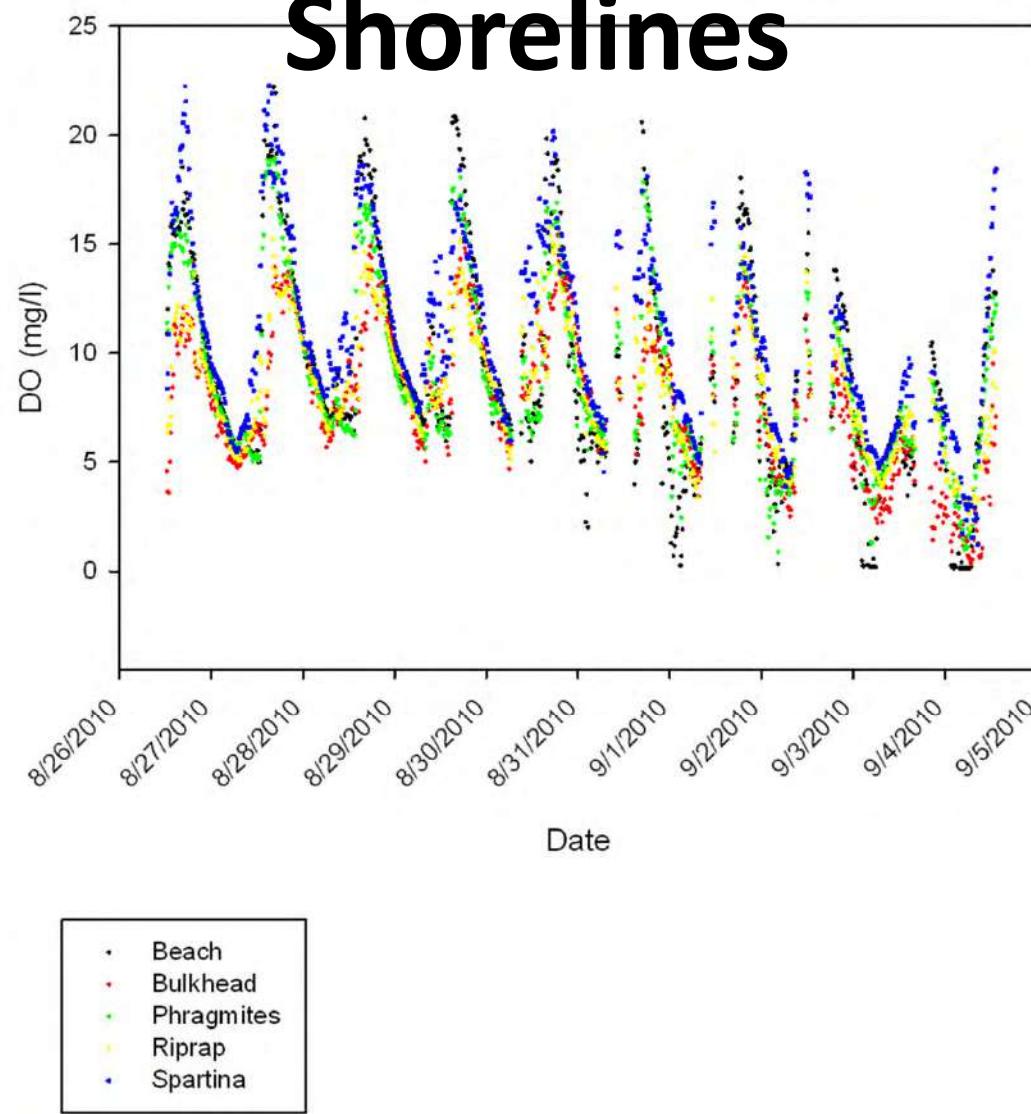

Blue Crab MDS

Overview of Research

- Macrofauna shoreline sampling
 - Weekly seines for fish assemblage and blue crab abundance
- Diel-cycling hypoxia analysis along shoreline types
- Atlantic silverside egg deposition along shoreline types
- Riprap-sill macrofauna shoreline sampling

Diel – Cycling Hypoxia Along Shorelines

Overview of Research

- Macrofauna shoreline sampling
 - Weekly seines for fish assemblage and blue crab abundance
- Diel-cycling hypoxia analysis along shoreline types
- Atlantic silverside egg deposition along shoreline types
- Riprap-sill macrofauna shoreline sampling

Atlantic Silverside

- Extremely abundant forage fish
- Widely distributed
- Important food source
 - striped bass
 - Atlantic mackerel
 - bluefish
 - others

fishbase.org

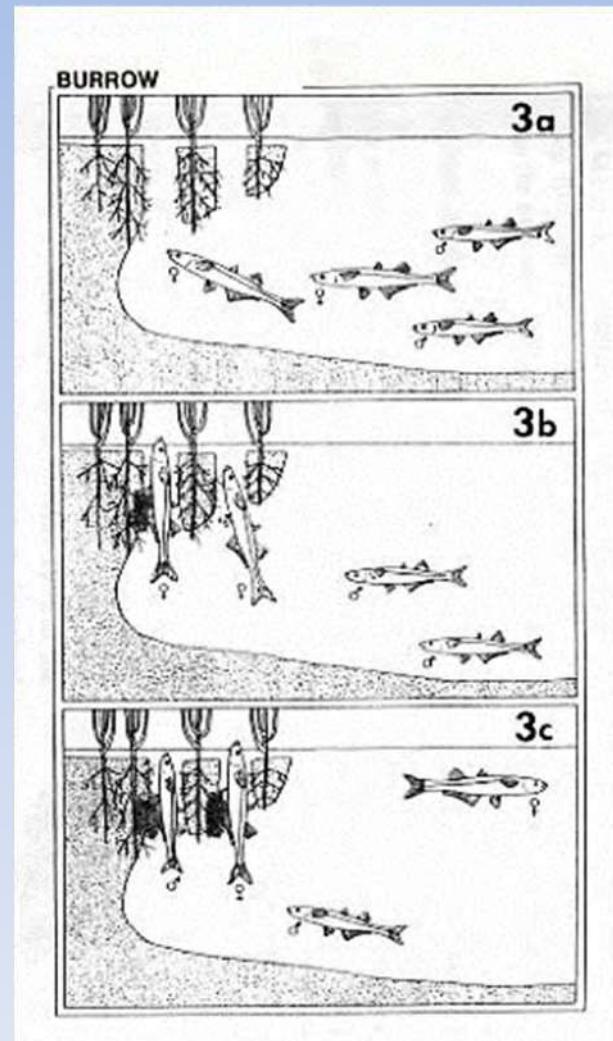

(Merriman 1941; Bayliff 1950; Bigelow and Schroeder 1953; Schaefer 1971)

Spawning

- Eggs are demersal, adhesive
- Laid in shallow waters of estuarine intertidal zones (Kuntz and Radcliffe 1917; Hildebrand 1922; Middaugh 1981)
- Numerous substrates for egg attachment noted -
 - submerged vegetation (Bayliff 1950)
 - eelgrass (Middaugh 1981)
 - Mud crab burrows (Middaugh et al. 1981)
 - *Spartina alterniflora* (Middaugh et al. 1981)
 - filamentous algae (Conover 1982)
 - sand (Wang 1974)
 - beach trash (Nichols 1908)

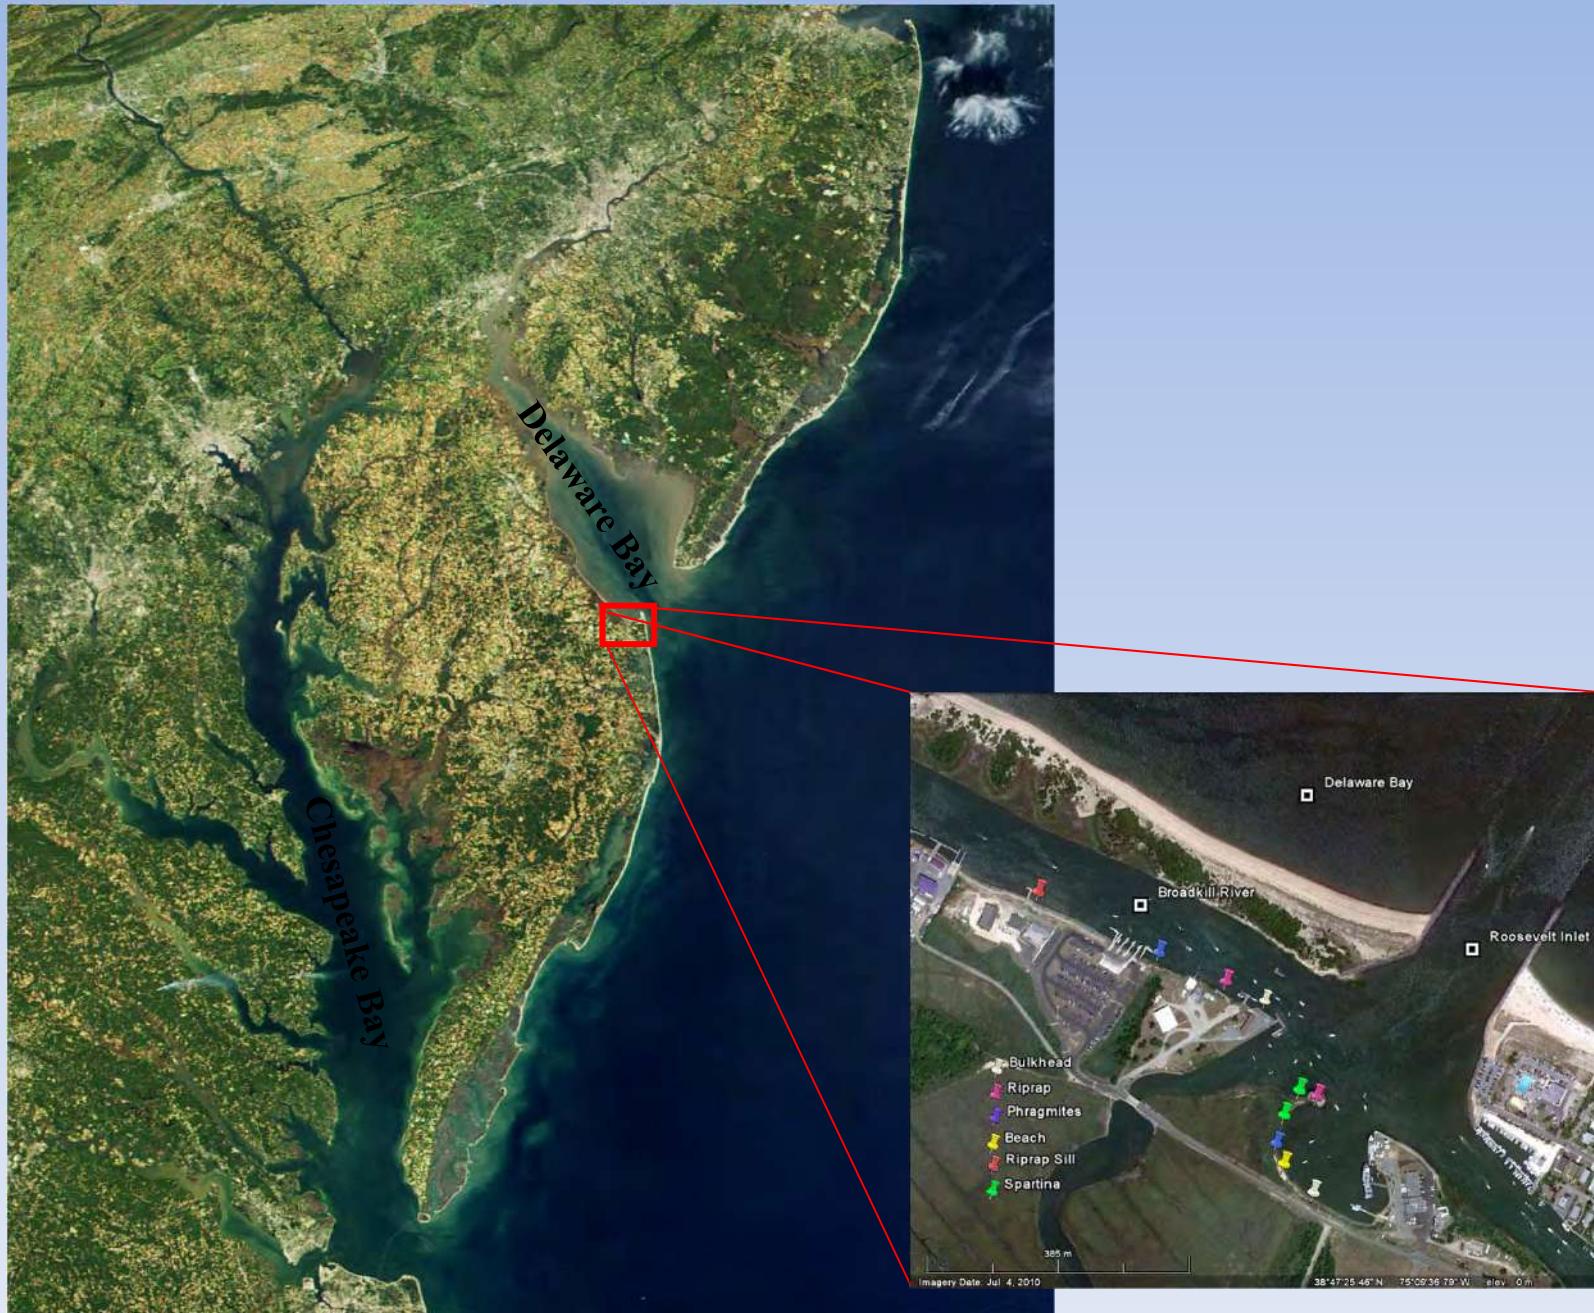

From Middaugh et al. 1981

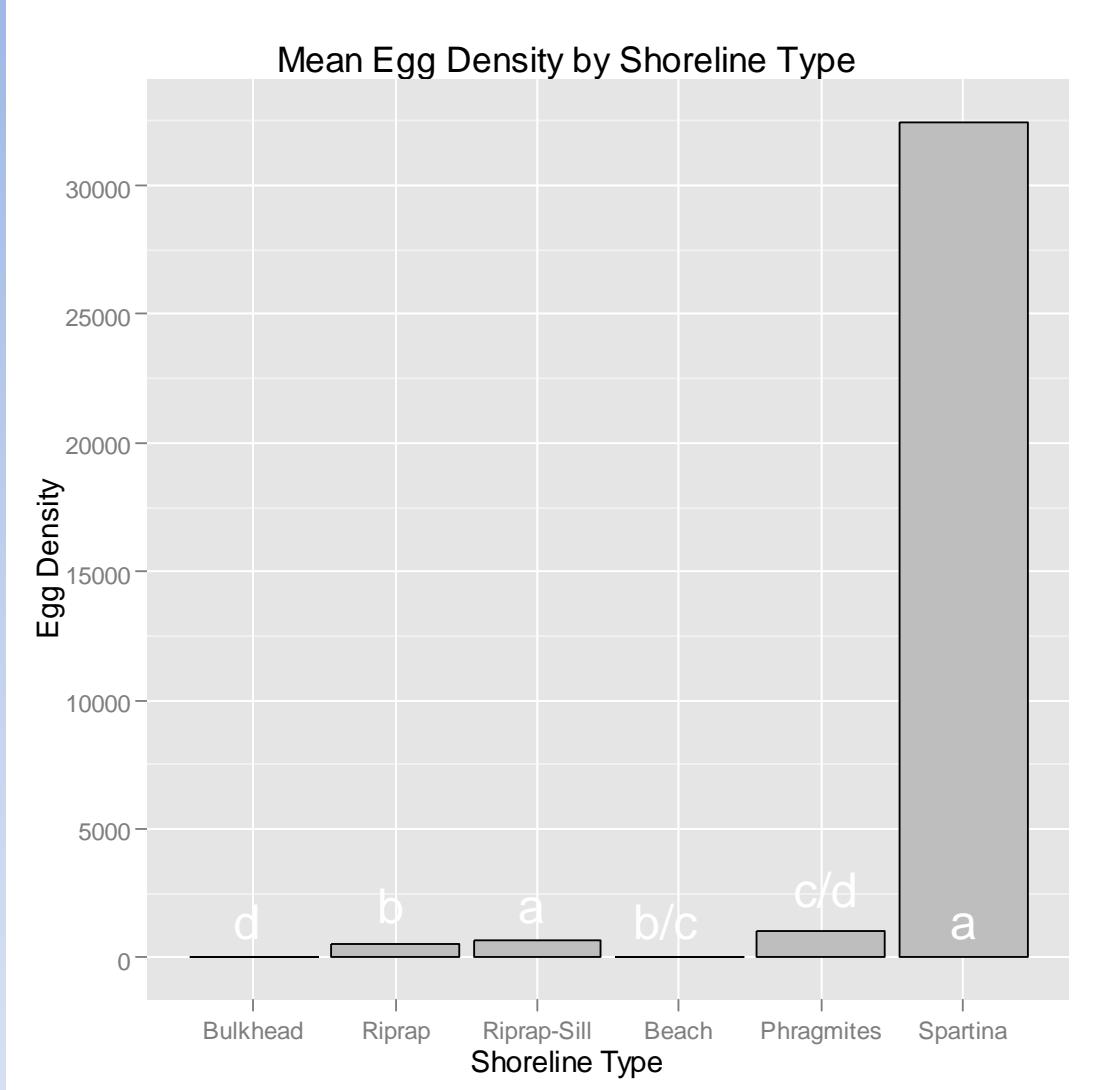

Objectives

1. Quantify density of eggs laid at six shoreline types at the mouth of Delaware Bay
2. Quantify density of eggs laid on substrates at the mouth of Delaware Bay
3. Determine if a relationship exists among shoreline type and substrate use for deposition of *Menidia* eggs

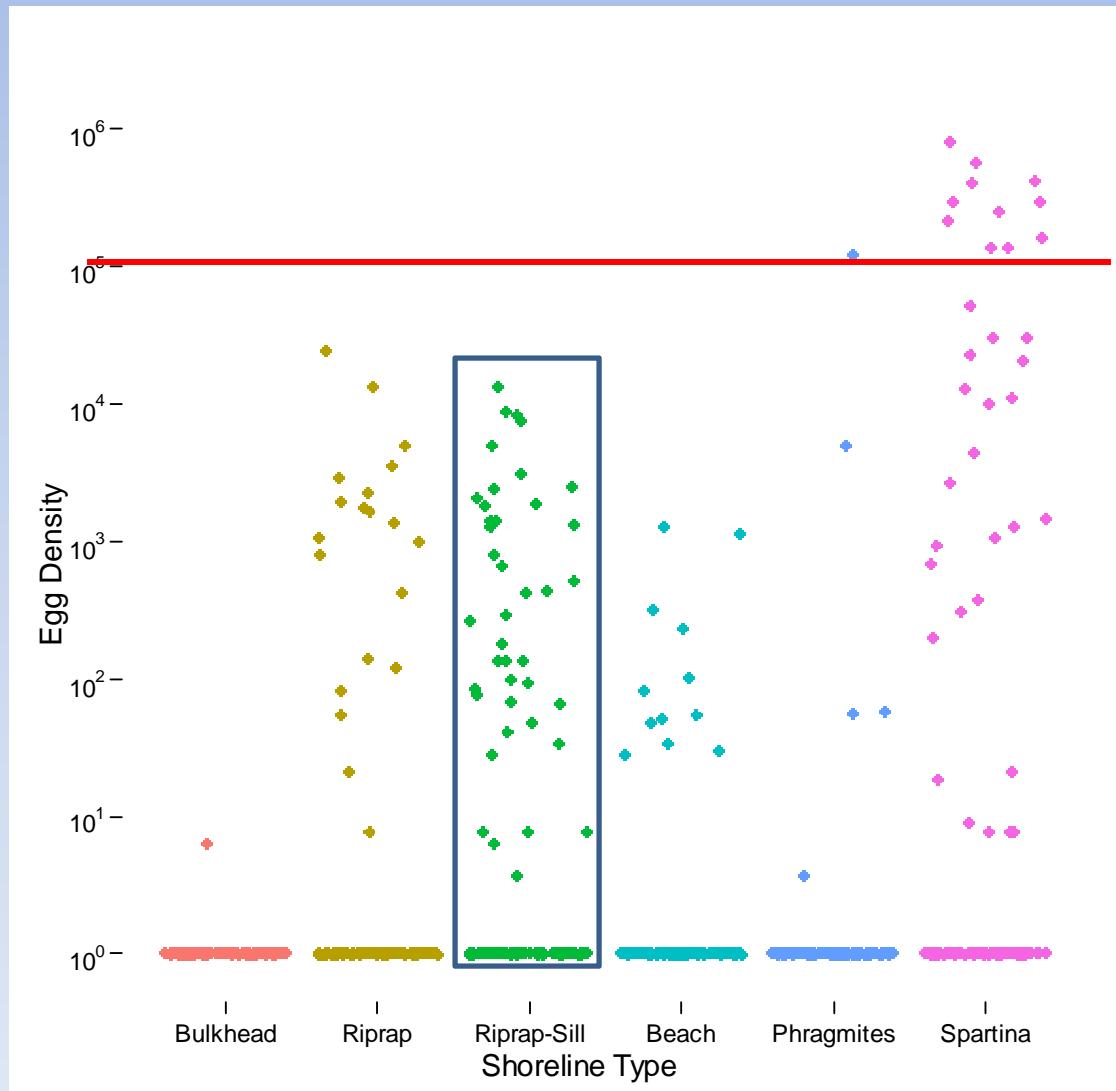

Total egg abundance
percentages -

	Bulkhead	Riprap	Riprap-Sill	Beach	Phragmites	Spartina
	< .01 %	1.50%	1.60%	0.08%	3.00%	94.00%

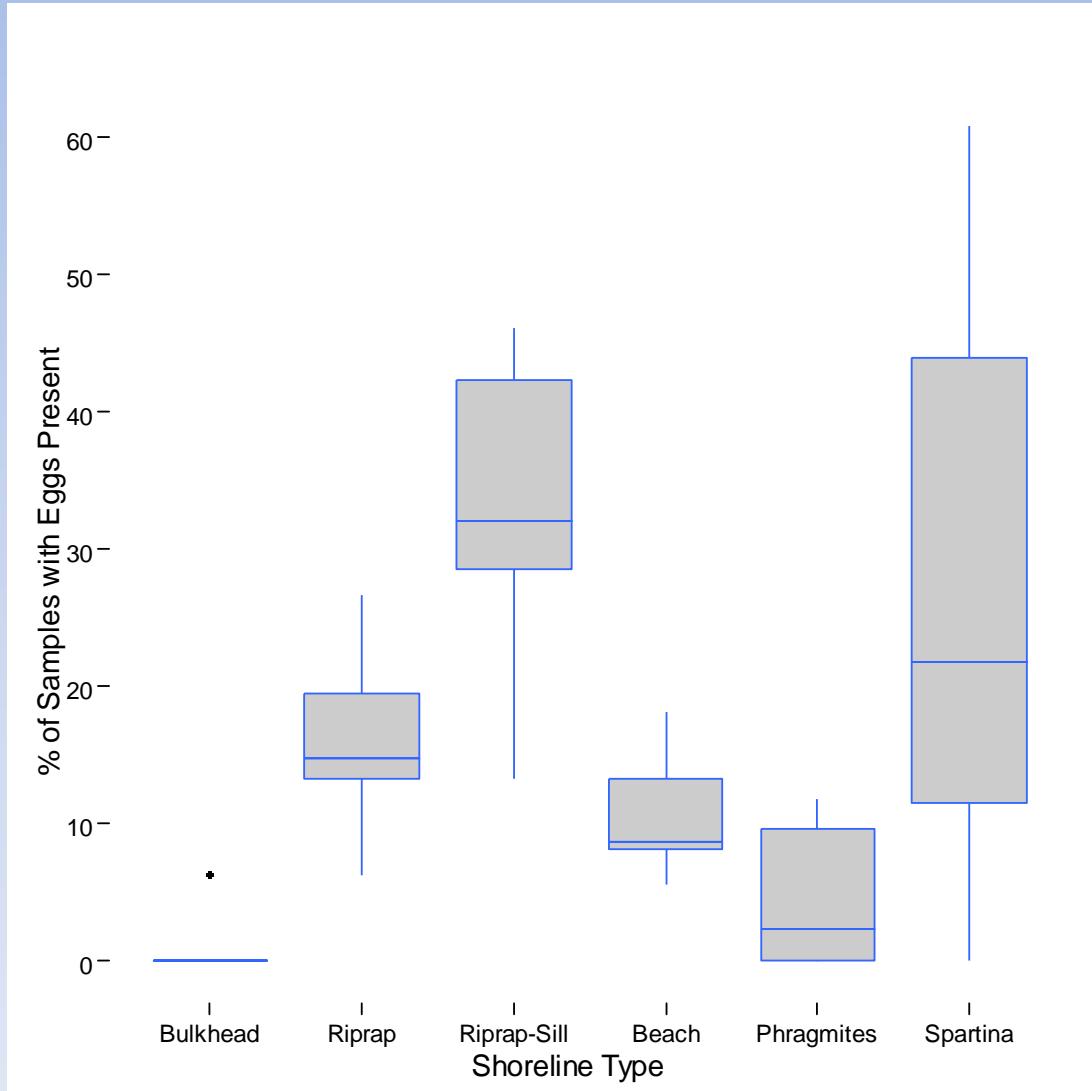

Shoreline Results

Shoreline Results

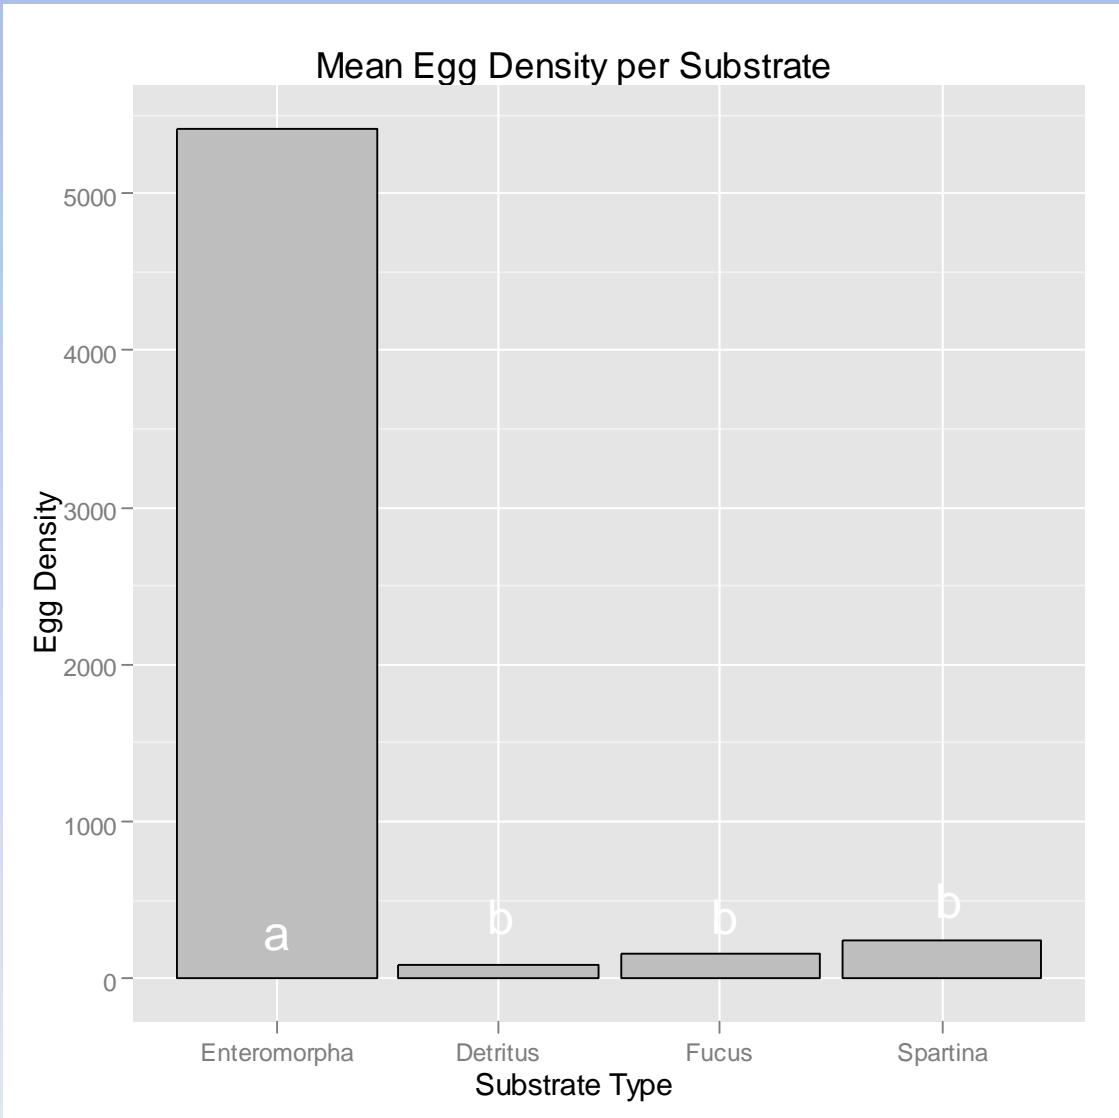

Shoreline Type Conclusion

- *Spartina* > 93% total eggs
- *Spartina* and Riprap-Sill = statistically greatest egg densities
- Other hardened/unhardened shorelines had low egg densities

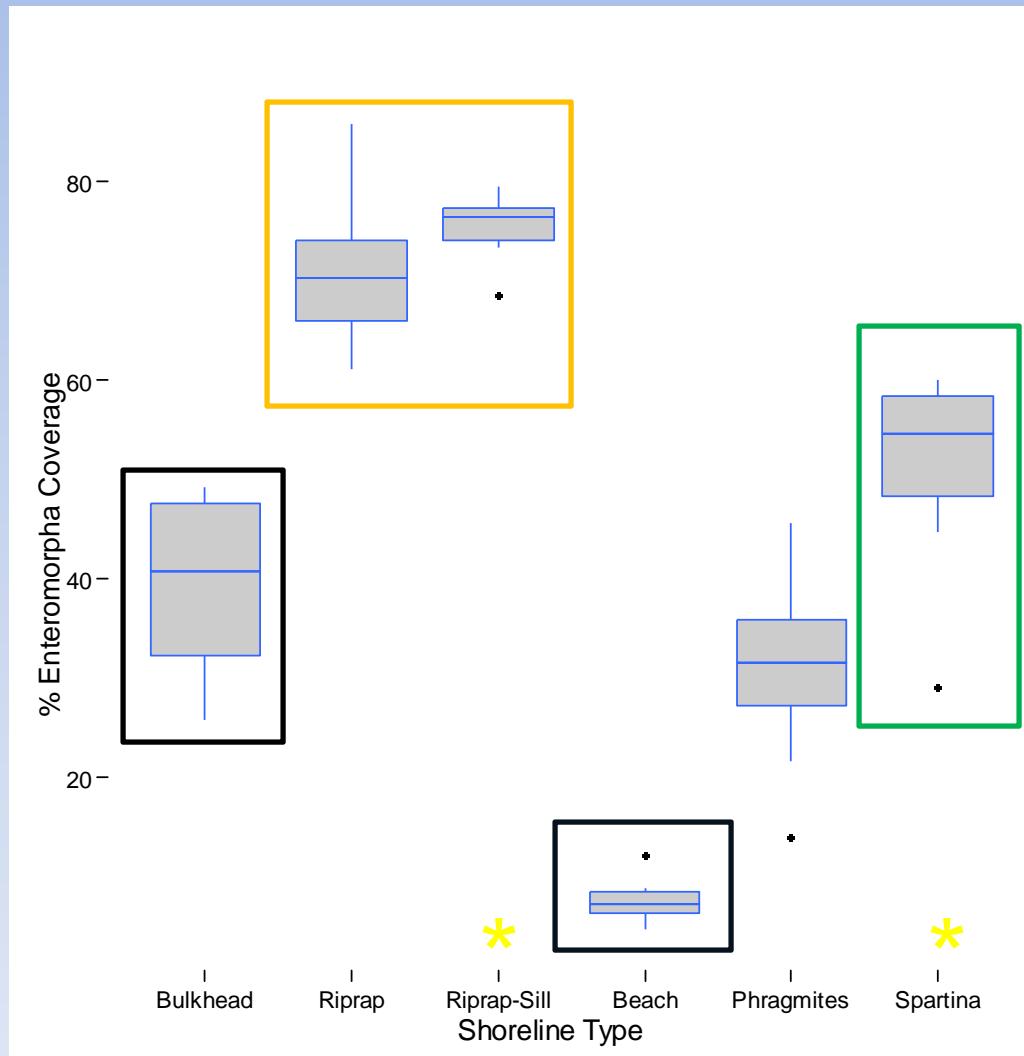

Substrate Results

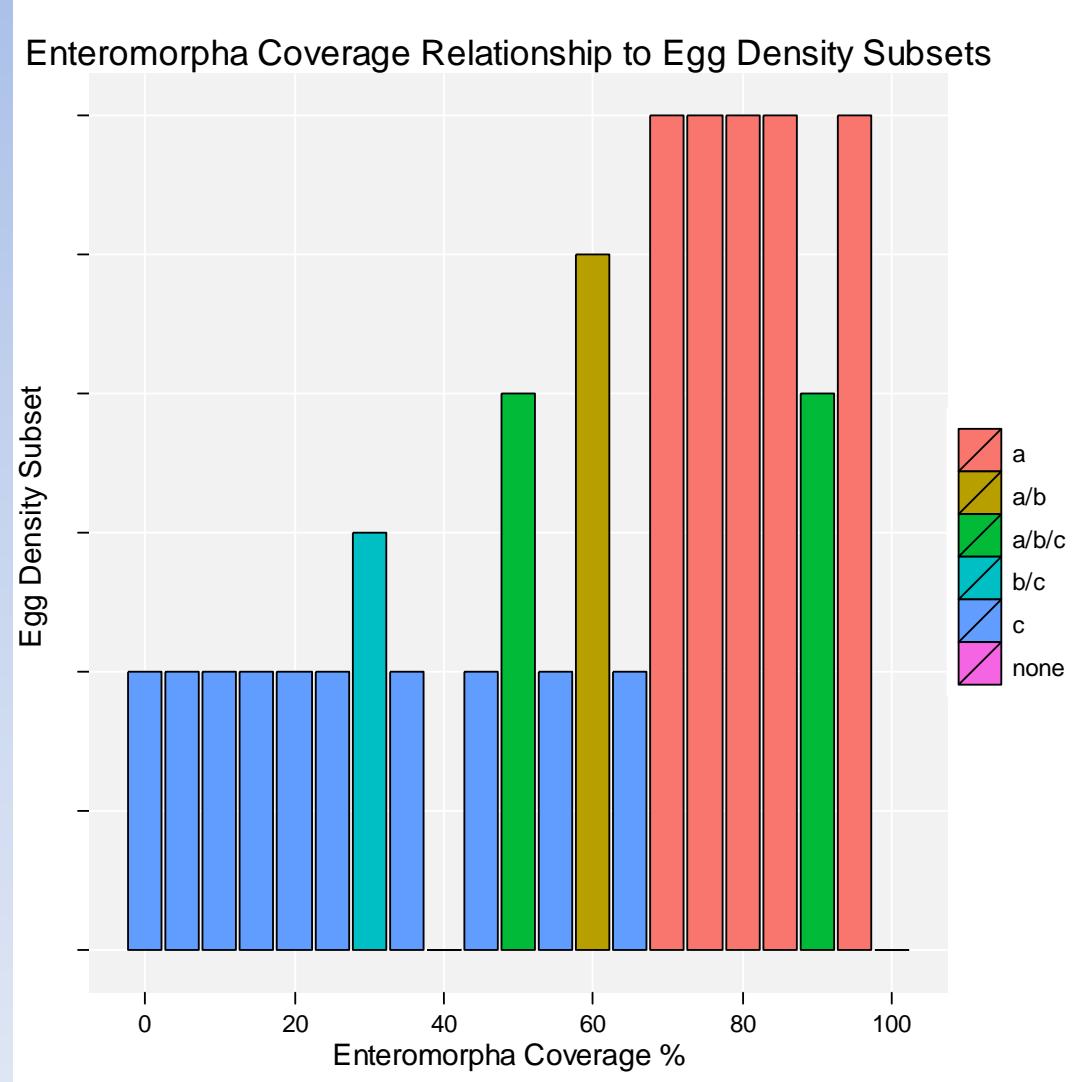

Results

Results

Substrate Conclusion

- *Enteromorpha spp.* had highest egg densities of any substrate.
- Other substrates used minimally:
 - *Spartina*
 - Detritus
 - *Fucus*
 - *Ulva*
 - Rock

Conclusions

- Shoreline type significant determinant of deposition density
 - 93 % of eggs from *Spartina*
 - Riprap-Sill also utilized regularly

- Substrate selection is similar among shoreline types
 - *Enteromorpha spp.* most utilized

Overview of Research

- Macrofauna shoreline sampling
 - Weekly seines for fish assemblage and blue crab abundance
- Diel-cycling hypoxia analysis along shoreline types
- Atlantic silverside egg deposition along shoreline types
- Riprap-sill macrofauna shoreline sampling

Riprap-Sill Macrofaunal Sampling

- Sampled bi-weekly 6/18/10 - 9/19/10
 - Riprap-sill
 - Riprap
 - Spartina
- Seine
 - Flood tide
 - Ebb tide
- Minnow pots
